

2-in-1 Solution: Backup and File Sharing

ShareSync combines file and folder backup with robust sharing features. Use one service and stop worrying about file backup while simplifying file sharing and collaboration.

Backup lets you...

- Back up your files in real time
- Access files from virtually any device
- Easily restore lost data

File Sharing lets you...

- Share backed up files with anyone
- Collaborate and share files directly from Microsoft® Office and Outlook®
- Replace sending large files with links

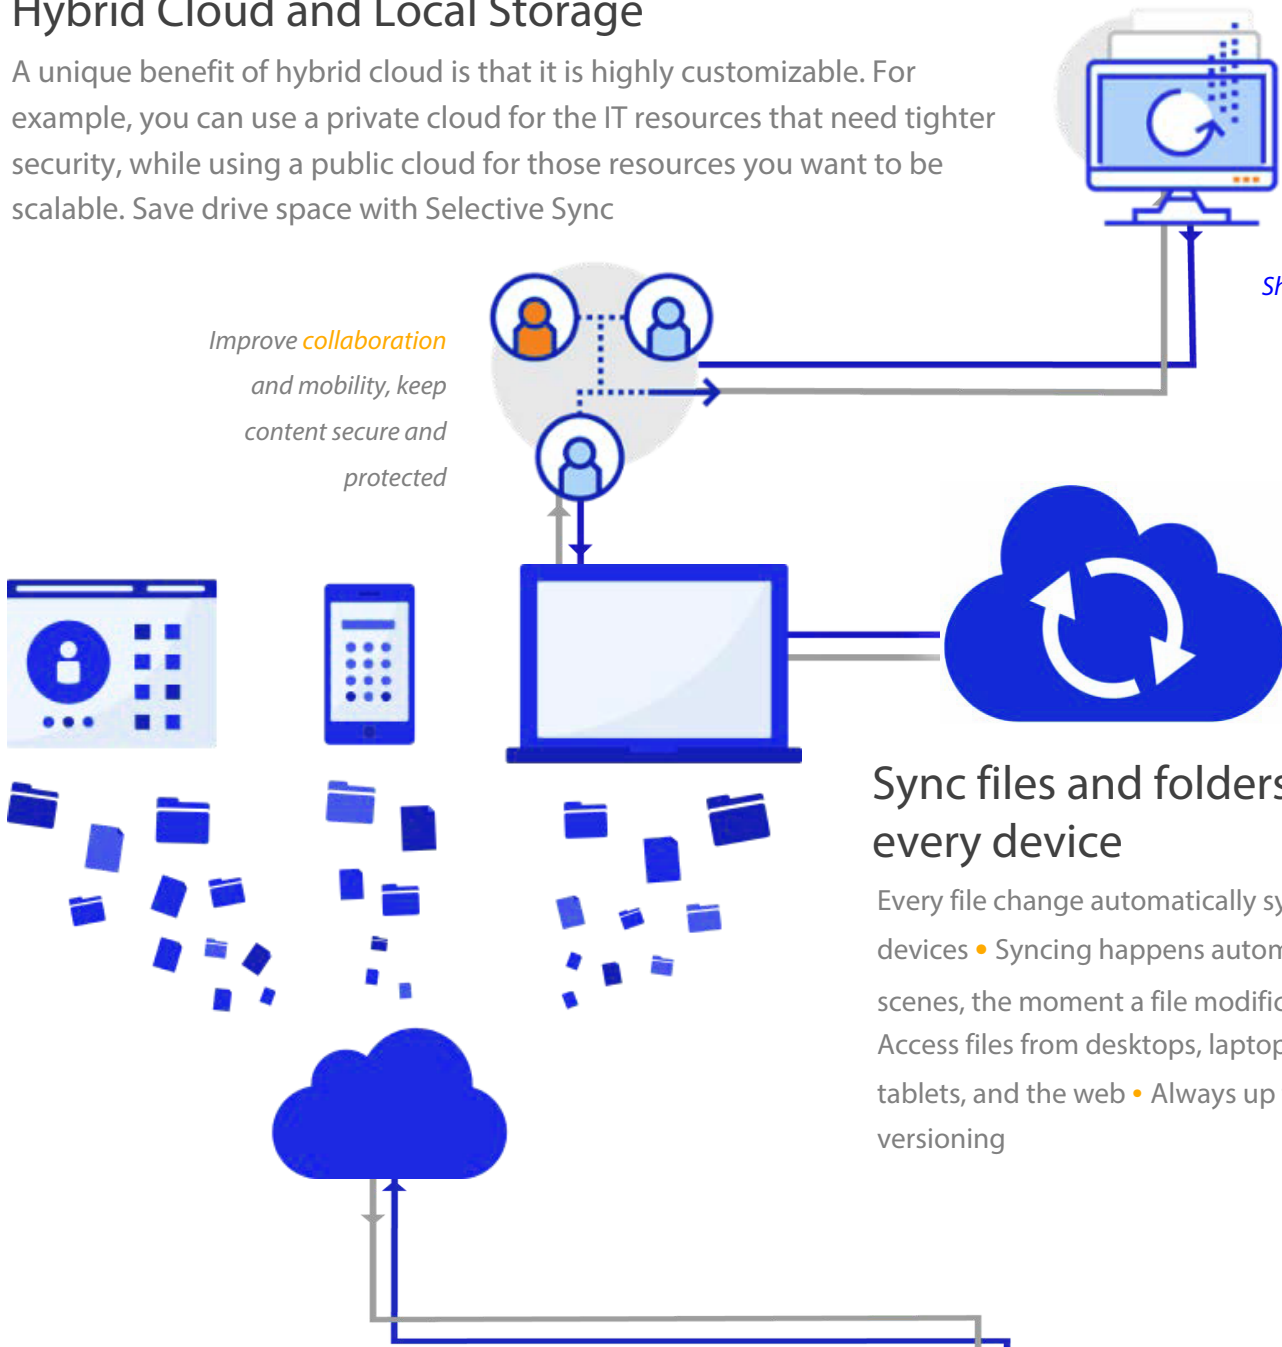

Ransomware Aware - Keep Files Safe and Secure from Ransomware Attacks - Files are locked and encrypted during transit and storage

Hybrid Cloud and Local Storage

A unique benefit of hybrid cloud is that it is highly customizable. For example, you can use a private cloud for the IT resources that need tighter security, while using a public cloud for those resources you want to be scalable. Save drive space with Selective Sync

Improve *collaboration* and mobility, keep content secure and protected

Share with recipients both inside and outside the organization.

Sync files and folders across every device

Every file change automatically syncs to all ShareSync devices • Syncing happens automatically, behind the scenes, the moment a file modification occurs • Access files from desktops, laptops, smart-phones, tablets, and the web • Always up to date • Unlimited versioning

Keep content secure and protected

Data is encrypted at-rest and in-transit and with an additional account-specific unique security key • Content protection features guard against accidental deletion or version conflict • Permissions and access are strictly controlled and easily amended at any time • ShareSync data on lost or stolen devices can be wiped remotely • Reliability is assured with a 99.999% financially backed SLA

Security Features for ShareSync

Security features of ShareSync

ShareSync's data protection features enable business managers to:

- ✓ Assure compliance with security best practices
- ✓ Get full visibility over end-user activity with Audit Log and Admin File Management features
- ✓ Minimize potential downtime from data loss events with real-time backup and restore capabilities
- ✓ Utilize remote wipe capabilities in case of lost or stolen devices
- ✓ Keep content safe with at-rest and in-transit encryption
- ✓ Assure reliability with a 99.999% financially backed uptime guarantee
- ✓ Leverage enterprise-class datacenters with redundant storage clusters and connections to multiple Internet providers
- ✓ Protect content integrity with features that guard against accidental deletion or version conflict
- ✓ Keep content in the right hands with permissions and access that are strictly controlled and easily amended

Security Features for ShareSync

Recover from Ransomware Attack

ShareSync offers instant rollback and instant access, enabling users to keep working during a ransomware outbreak

Instantly roll back to uninfected files

Immediately access those clean files on any device

Keep users productive while IT restores infected computers

Avoid paying ransom to criminals

Plus: save money with a 2-in-1 backup and file sharing service

Encryption

ShareSync data is encrypted both when it's at rest as well as when it's in transit. At-rest data is encrypted with 256-bit AES encryption, while in-transit data is encrypted using 256-bit SSL/HTTPS encryption. Additionally, ShareSync generates a unique encryption key for every account, creating an even greater degree of protection through data isolation.

Password Protection

Each time a user activates a new ShareSync device or accesses ShareSync from the web, they must login using their username and password. ShareSync password policies are imported from Active Directory and utilize "strong" parameters, helping to eliminate the possibility that external parties will guess passwords.

This Active Directory integration requires users to use the same password for ShareSync that they use for all their cloud services. Because there are no additional passwords to remember, it reduces the possibility that they will write their password down where others might see it.

The screenshot shows the ShareSync login page. At the top left is the ShareSync logo (a blue cloud icon) and the text 'ShareSync'. Below the logo are two input fields: 'Login (Email)' containing 'williamjones@creativesvcs.com' and 'Password' with masked characters. There is a 'Remember me' checkbox which is checked. At the bottom is a blue 'Login' button.

File Backup and Restore
